This presentation is part of the action "NFP4Health" which has received funding from the European Union's Health Programme (2014-2020) under grant agreement No 101035965.

OBJECTIVES

KEY OBJECTIVE

To promote the prevention of cardiovascular diseases by transferring the Italian screening model "CARDIO 50" between the Member States of the European Union, guaranteeing maximum sustainability and applicability to a large part of the population

[CARDIO50 – adopted by the Veneto Region - aims to estimate cardiovascular risk among the 50 years old population, identify persons with inadequate lifestyles, new cases of hypertension, hyperglycemia and hypercholesterolemia, activate an integrated model of assistance to help modify or reduce risk factors among healthy subjects, promote interventions to change unhealthy lifestyles and to increase knowledge and perceptions of CVD risks among the general population]

SPECIFIC OBJECTIVES

- adapting and exporting the CARDIO 50 screening model to the EU member countries participating in the project (Lithuania, Romania, Luxembourg)
- affecting the risk factors of cardiovascular, behavioural and medical diseases
- refining the screening model "YOUNG50" through the comparison between member countries participating in the project, thus obtaining maximum performance, sustainability and dissemination
